

What Changes, and Where?

Legislative Churn Across Saudi Arabian Legislation

Abdullah Almohammedi

Independent Researcher

`abdullah.m.almohammedi@gmail.com`

ORCID: 0009-0001-0832-0995

Word count

4,706 words, including footnotes.

Funding

No funding was received for conducting this study.

Conflict of interest

The author declares no conflict of interest.

Ethics approval

Not applicable. The study involves no human participants, no animal subjects and no personal data. It analyses published national legislation only.

Acknowledgements

None.

Data availability

The corpus, its glossary layer, and the analysis and figure scripts that reproduce every number and figure reported in the article are openly available at <https://github.com/Abdullah-m7/saudi-legal-corpus-ai> and archived on Zenodo under the MIT licence (10.5281/zenodo.22019183; concept DOI 10.5281/zenodo.22019182).

Declaration of generative AI use

DRAFT — the author must confirm or rewrite this before submission; it is a statement in his name, not the assistant's.

Generative AI (Claude, Anthropic) was used as a research assistant throughout this work: to write the analysis and figure scripts, to draft and revise the manuscript, and to run adversarial checks against its own claims. The author set the research question, directed the analysis, and is responsible for the content. Every figure reported here is regenerated by the openly published scripts from the openly published corpus, so that any reader can reproduce it independently of how it was written.

CRedit roles

A. Almohammed: conceptualisation, data curation, methodology, software, formal analysis, investigation, writing — original draft, writing — review and editing.

Biographical note

DRAFT — to be written by the author, up to 200 words.

Related work by the author

Three companion manuscripts drawing on the same corpus are under review elsewhere: one describing the corpus as a research resource, one analysing its citation network, and one measuring its definitional lexicon. None overlaps with the present article's contribution, and none is under consideration by this journal.

Legal status of the sources

The article analyses a non-official research corpus. Nothing in it constitutes legal advice, and the binding text of any instrument is the Arabic original published in *Umm al-Qura*. Instrument identifiers are given as recorded in the corpus registry.
